

Nabil Baugher

nabilbaugher@gmail.com | linkedin.com/in/nabil-baugher

EDUCATION

Massachusetts Institute of Technology

B.S. Computation and Cognition (Course 6-9)

Cambridge, MA

Aug. 2020 – May 2024

EXPERIENCE

Aluna Labs

Research Consultant

Remote

Apr. 2026 - May 2026

- Built a benchmark showing Aluna’s oncology tissue world model can recover ligand–receptor pathway relationships despite training solely on steady-state, single-tissue samples

Baseline AI

Co-Founder & CTO

San Francisco, CA

Aug. 2023 – Apr. 2026

- Co-founded clinical programming automation startup through Y Combinator S24
- Architected a fully agentic, self-validating pipeline converting raw clinical trial datasets into FDA submission-ready SDTM formats; achieved ~93% accuracy on public pharmaverse benchmarks with no human guidance despite minimal publicly available training data
- Built a custom agentic orchestration framework from scratch directly on the Anthropic and OpenAI APIs
- Built a historical data processing and analysis pipeline for a clinical research client to accelerate trial design
- Built a data ingestion and processing pipeline for a medical device client to extract insights from device trial data

Google – YouTube

Software Engineering Intern, Satisfaction Team

Remote

Jun. 2023 – Aug. 2023

- Designed and ran feature experiments to measure and improve user satisfaction signals across YouTube Posts
- Prototyped and shipped a multi-headed satisfaction model, decomposing monolithic satisfaction predictions into distinct behavioral dimensions to improve targeting precision

MIT – Sinha Lab

Undergraduate Researcher

Cambridge, MA

Sept. 2022 – Jan. 2023

- Investigated whether CNNs rely on global shape features or local textural features for object recognition, in contrast to human perception
- Collaborated on reimplementing Geirhos et al. (2019), replicating the finding that ImageNet-trained CNNs exhibit a strong texture bias absent in human observers

Slack

Software Engineering Intern

San Francisco, CA

May 2022 – Aug. 2022

- Led the replacement and deprecation of core user fetchers responsible for recurring production incidents
- Reduced potentially dangerous user fetcher calls by 99.99%, from ~15M/day to ~2K/day
- Collaborated on a revamp of `client.boot`, cutting prohibitive load times for users with 100K+ channels

Audible

Software Development Engineer Intern

Remote

June 2021 – Aug. 2021

- Built a backend service in Java to validate book carousels posted to audible.com by the marketing team
- Resolved ~400 exceptions per minute clogging production logs, eliminating recurring high-severity customer-impacting incidents
- Leveraged AWS CDK, Lambda, and API Gateway, integrated with internal Audible systems

SKILLS

Languages: Python, TypeScript, Java, SQL, Hack/PHP

ML / AI: Anthropic & OpenAI APIs, custom agentic framework design

Infrastructure: Vercel, Fly.io, Redis, Celery, AWS (Lambda, CDK, API Gateway, DynamoDB)
